

## MAGNEPAN

So sweet sounding speakers but we can extract more music from them!

New modified crossovers and Teflon rewiring is all you need

Rear panel for the internal crossover area is also supported

Optionally rear frame II support is provided for structure rigidity which gives better focused stereo images

All our metal parts we use are from inox 304 in brushed finish even if the screws because of the non magnetic properties that absorb no flux from the strong magnets of the speakers!
